BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

IMAGES ARE BEST AVAILABLE COPY.

As rescanning documents will not correct images, please do not report the images to the Image Problem Mailbox.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ICE induces specific specific cytotoxic T lymphocytes (CTL) and secretion by these CTL of cytotoxic factors, e.g. interleukin-2, interferon gamma and tumour necrosis factor. ICE polypeptides and polynucleotides are used for treating cancer, by in vivo or in vitro immunisation, particularly solid cancers and most especially hepatocarcinoma or adenocarcinoma of colon and kidney. They are also used to stimulate the immune system, and to increase, in culture, the production of associated-associated CTL, for reinjection, and/or to induce secretion of cytotoxic factors from CTL Dendritic cells loaded with iCE are used to induce such CTL in cultures.

```

The present sequence is encoded by the coding region of human intestinal carboxylesterase (ICE) gene. ICE induces specific-specific cytotoxic T lymphocytes (CTL) and secretion by these CTL of cytotoxic factors, e.g. interleukin-2, interferon gamma and tumour necrosis factor iCE

pustulosis,

They are also used to stimulate the immune system, and to increase, in culture, the production of associated associated CTL, for reinjection, and/or to induce secretion of cytotoxic factors from CTL. Dendritic cells loaded with iCE are used to induce such CTL in cultures.

The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA).

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      and to produce other types of data and products dependent on DNA and amino acid sequences. AB600010-AB630377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WII
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                for identifying expressed genes. (I) is useful in gene therapy technique to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity.
                                                      N-PSDB; AAS83739

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II) The CC polymucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC (III). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as CC a food supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polymucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. ABG00010-ABG30377 represent novel human CC diagnostic amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed CC at figure and products dependent on DNA and CC specification, but was obtained in electronic format directly from WIPO CC at figure and products dependent on DNA and CC at figure and contained in electronic format directly from WIPO CC at figure and contained in electronic format directly from WIPO CC at figure and contained in electronic format directly from WIPO CC at figure and contained in electronic format directly from WIPO CC at figure and contained in electronic format directly from WIPO CC at figure and contained in electronic format directly from WIPO CC at figure and contained in electronic format directly from WIPO CC at figure and contained in electronic format directly from WIPO CC at figure and contained in electronic format directly from WIPO CC at figure and contained in electronic format directly fro

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           polynucleotide and polypeptide sequences are useful in diagnostic and therapeutic methods, and compositions for various cancers such as prostate cancer. The sequences are useful for inhibiting the growth of cancer cells that express PHOR1-All or PHOR1-F5D6 and for treating cancer. The PHOR1-All or PHOR1-F5D6 polypeptide or a fragment thereof can be used to elicit an immune response. The present sequence can be an amino acid sequence from the translation of the DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            can be used to elicit an immune response. The present s represents an amino acid sequence from the translation sequence for human PHOR1-F5D6 splice variant C.
                                                                      Propionibacterium acnes polypeptides and nucleic acids useful for vaccinating against and diagnosing infections, especially useful
                                                                                                                                                                              Skeiky YAW,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides are therefore treat P. acnes infections. The antibodies may also be diagnostic agents for determining P. acnes presence, for example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne,
                                                          A gene encoding tick salivary gland antigen - useful protecting animals from tick-carried infections
                                                                                                                                                                                                                                                                                                                                 Tick; vaccine; infection; salivary gland antigen; serine protease; cysteine protease; blood sucker.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           present invention also describes a tick salivary gland antigen relations and a tick derived serine protease. A nucleotide sequence encoding any of the above proteins can be used in a vaccine against tick carried infections for domestic animals such as cattle.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA).

Note: The sequence data for this patent did not form part of the prin specification, but was obtained in electronic format directly from W.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invent; and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to

The invention provides human and mouse UCP3 genes (AAV71710 and AAV71712) encoding UCP3 proteins (AAV81595) respectively. A host cell transformed with a construct comprising the UCP3 nucleic acid can be used for the recombinant production of the protein. The UCP3 is involved in the regulation of thermogenesis in mammals. The nucleic acids (AAV71710 to AAV71712) can be used for identifying compounds which alter UCP3 activity. Enhancers of UCP3 can be used for enhancing protein catabolism in a mammal and can be used for enhancing protein catabolism in a mammal such as of UCP3 can be used for inhibitors of UCP3 can be used for inhibitors of UCP3 can be used for entablism in a mammal such as anhibiting muscle wasting. They can be used for curtailing muscle wasting due to infection (e.g. HIV), cancer, tumour cachexia, muscle diseases (e.g. muscular dystrophy) or as a possible treatment for non-insulin dependent diabetes mellitus. The products can also be used for detection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         for modula or muscle

                                                                                                                                                                                                                    RESULT 13
ABG05131
                                                                                                    Ş
                                                                                                                                                                                                                                                                                                The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, complymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) suseful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical considers involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in collagnostics, forensics, gene mapping, identification of mutations crasponsible for genetic disorders or other traits to assess biodiversity and oacid sequences. Abg00010-Abg30377 represent novel human crasponsitic amino acid sequences of the invention.
                                                                                                                           Query Match

                                                                                                                                                                                                                                                polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in attance for a commandian identification of mintations.
                                                                                                                        diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromo and gene mapping, and in recombinant production of (II). The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 20;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Drmanac RT, Liu C,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               31-MAR-2000; 2000US-0540217
